

# VERTIV™ HEROES OF POWER

Michael Faraday

## ELECTROCHEMISTRY

The father of electrochemistry.

In 1821, at the age of 29, this influential and self-taught scientist pioneered work in *Electromagnetic Rotation and Induction* and succeeded in producing mechanical motion by means of a permanent magnet and an electric current, upon which the electric motor and generator are based.

Kind of an early “motor-head”, wasn’t he?

The innovative **LIEBERT® EXM™ UPS** continues our history with break-through power systems for critical applications.

- Efficient
- Scalable
- Intelligent
- Reliable
- Flexible
